Sustain Podcast #33  How Font Awesome raised
\$1mm on Kickstarter

ethical ad by CodeFund

Example

```
#!/usr/bin/env bash

NAME="John"
echo "Hello $NAME!"
```

Variables

```
NAME="John"
echo $NAME
echo "$NAME"
echo "${NAME}!"
```

String quotes

```
NAME="John"
echo "Hi $NAME"    #=> Hi John
echo 'Hi $NAME'    #=> Hi $NAME
```

Shell execution

```
echo "I'm in $(pwd)"
echo "I'm in `pwd`"
# Same
```

See [Command substitution](#)

Conditional execution

```
git commit && git push
git commit || echo "Commit failed"
```

Functions

```
get_name() {  
    echo "John"  
}  
  
echo "You are $(get_name)"
```

See: [Functions](#)

Conditionals

```
if [[ -z "$string" ]]; then  
    echo "String is empty"  
elif [[ -n "$string" ]]; then  
    echo "String is not empty"  
fi
```

See: [Conditionals](#)

Strict mode

```
set -euo pipefail  
IFS=$'\n\t'
```

See: [Unofficial bash strict mode](#)

Brace expansion

```
echo {A,B}.js
```

<code>{A,B}</code>	Same as <code>A B</code>
<code>{A,B}.js</code>	Same as <code>A.js B.js</code>
<code>{1..5}</code>	Same as <code>1 2 3 4 5</code>

See: [Brace expansion](#)

Parameter expansions

Basics

```
name="John"
echo ${name}
echo ${name/J/j}      #=> "john" (substitution)
echo ${name:0:2}      #=> "Jo" (slicing)
echo ${name::2}       #=> "Jo" (slicing)
echo ${name::-1}      #=> "Joh" (slicing)
echo ${name: (-1)}    #=> "n" (slicing from right)
echo ${name: (-2):1}  #=> "h" (slicing from right)
echo ${food:-Cake}    #=> $food or "Cake"
```

```
length=2
echo ${name:0:length} #=> "Jo"
```

See: [Parameter expansion](#)

```
STR="/path/to/foo.cpp"
echo ${STR%.cpp}      # /path/to/foo
echo ${STR%.cpp}.o    # /path/to/foo.o

echo ${STR##*.}       # cpp (extension)
echo ${STR##*/}       # foo.cpp (basepath)

echo ${STR#*/}        # path/to/foo.cpp
echo ${STR##*/}       # foo.cpp

echo ${STR/foo/bar}   # /path/to/bar.cpp
```

```
STR="Hello world"
echo ${STR:6:5}       # "world"
echo ${STR:-5:5}      # "world"
```

```
SRC="/path/to/foo.cpp"
BASE=${SRC##*/}       #=> "foo.cpp" (basepath)
DIR=${SRC%$BASE}      #=> "/path/to/" (dirpath)
```

Substitution

<code>\${FOO%suffix}</code>	Remove suffix
<code>\${FOO#prefix}</code>	Remove prefix
<code>\${FOO%%suffix}</code>	Remove long suffix
<code>\${FOO##prefix}</code>	Remove long prefix
<code>\${FOO/from/to}</code>	Replace first match

<code>\${FOO//from/to}</code>	Replace all
<code>\${FOO/%from/to}</code>	Replace suffix
<code>\${FOO/#from/to}</code>	Replace prefix

Comments

<code># Single line comment</code>
<code>: ' This is a multi line comment '</code>

Substrings

<code>\${FOO:0:3}</code>	Substring (position, length)
<code>\${FOO:-3:3}</code>	Substring from the right

Length

<code>\${#FOO}</code>	Length of <code>\$FOO</code>
-----------------------	------------------------------

Manipulation

<pre>STR="HELLO WORLD!" echo \${STR,,} #=> "hELLO WORLD!" (lowercase 1st letter) echo \${STR,,,} #=> "hello world!" (all lowercase) STR="hello world!" echo \${STR^} #=> "Hello world!" (uppercase 1st letter) echo \${STR^^} #=> "HELLO WORLD!" (all uppercase)</pre>

Default values

<code>\${FOO:-val}</code>	<code>\$FOO</code> , or <code>val</code> if not set
<code>\${FOO:=val}</code>	Set <code>\$FOO</code> to <code>val</code> if not set
<code>\${FOO:+val}</code>	<code>val</code> if <code>\$FOO</code> is set
<code>\${FOO:?message}</code>	Show error message and exit if <code>\$FOO</code> is not set

The `:` is optional (eg, `${FOO=word}` works)

Loops

Basic for loop

```
for i in /etc/rc.*; do
    echo $i
done
```

C-like for loop

```
for ((i = 0 ; i < 100 ; i++)); do
    echo $i
done
```

Ranges

```
for i in {1..5}; do
    echo "Welcome $i"
done
```

With step size

```
for i in {5..50..5}; do
    echo "Welcome $i"
done
```

Reading lines

```
cat file.txt | while read line; do
    echo $line
done
```

Forever

```
while true; do
    ...
done
```

Functions

Defining functions

```
myfunc() {  
    echo "hello $1"  
}
```

```
# Same as above (alternate syntax)  
function myfunc() {  
    echo "hello $1"  
}
```

```
myfunc "John"
```

Returning values

```
myfunc() {  
    local myresult='some value'  
    echo $myresult  
}
```

```
result="$(myfunc)"
```

Raising errors

```
myfunc() {  
    return 1  
}
```

```
if myfunc; then  
    echo "success"  
else  
    echo "failure"  
fi
```

Arguments

<code>\$#</code>	Number of arguments
<code>\$*</code>	All arguments
<code>\$@</code>	All arguments, starting from first

<code>\$1</code>	First argument
<code>\$_</code>	Last argument of the previous command
See Special parameters.	

Conditionals

Conditions

Note that `[]` is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as `grep(1)` or `ping(1)`) can be used as condition, see examples.

<code>[] -z STRING []</code>	Empty string
<code>[] -n STRING []</code>	Not empty string
<code>[] STRING == STRING []</code>	Equal
<code>[] STRING != STRING []</code>	Not Equal
<code>[] NUM -eq NUM []</code>	Equal
<code>[] NUM -ne NUM []</code>	Not equal
<code>[] NUM -lt NUM []</code>	Less than
<code>[] NUM -le NUM []</code>	Less than or equal
<code>[] NUM -gt NUM []</code>	Greater than
<code>[] NUM -ge NUM []</code>	Greater than or equal
<code>[] STRING =~ STRING []</code>	Regexp
<code>((NUM < NUM))</code>	Numeric conditions
<code>[] -o noclobber []</code>	If OPTIONNAME is enabled
<code>[] ! EXPR []</code>	Not
<code>[] X [] && [] Y []</code>	And
<code>[] X [] [] Y []</code>	Or

File conditions

<code>[[-e FILE]]</code>	Exists
<code>[[-r FILE]]</code>	Readable
<code>[[-h FILE]]</code>	Symlink
<code>[[-d FILE]]</code>	Directory
<code>[[-w FILE]]</code>	Writable
<code>[[-s FILE]]</code>	Size is > 0 bytes
<code>[[-f FILE]]</code>	File
<code>[[-x FILE]]</code>	Executable
<code>[[FILE1 -nt FILE2]]</code>	1 is more recent than 2
<code>[[FILE1 -ot FILE2]]</code>	2 is more recent than 1
<code>[[FILE1 -ef FILE2]]</code>	Same files

Example

```
# String
if [[ -z "$string" ]]; then
    echo "String is empty"
elif [[ -n "$string" ]]; then
    echo "String is not empty"
fi
```

```
# Combinations
if [[ X ]] && [[ Y ]]; then
    ...
fi
```

```
# Equal
if [[ "$A" == "$B" ]]
```

```
# Regex
if [[ "A" =~ . ]]
```

```
if (( $a < $b )); then
    echo "$a is smaller than $b"
fi
```

```
if [[ -e "file.txt" ]]; then
    echo "file exists"
fi
```

Arrays

Defining arrays

```
Fruits=('Apple' 'Banana' 'Orange')
```

```
Fruits[0]="Apple"
Fruits[1]="Banana"
Fruits[2]="Orange"
```

Working with arrays

```
echo ${Fruits[0]}           # Element #0
echo ${Fruits[@]}           # All elements, space-separated
echo ${#Fruits[@]}          # Number of elements
echo ${#Fruits}             # String length of the 1st element
echo ${#Fruits[3]}          # String length of the Nth element
echo ${Fruits[@]:3:2}       # Range (from position 3, length 2)
```

Operations

```
Fruits=("${Fruits[@]}" "Watermelon")    # Push
Fruits+=('Watermelon')                  # Also Push
Fruits=( ${Fruits[@]/Ap*/} )             # Remove by regex match
unset Fruits[2]                          # Remove one item
Fruits=("${Fruits[@]}")                  # Duplicate
Fruits=("${Fruits[@]}" "${Veggies[@]}") # Concatenate
lines=(`cat "logfile"`)                  # Read from file
```

Iteration

```
for i in "${arrayName[@]}"; do
    echo $i
done
```

Dictionaries

Defining

```
declare -A sounds
```

```
sounds[dog]="bark"  
sounds[cow]="moo"  
sounds[bird]="tweet"  
sounds[wolf]="howl"
```

Declares `sound` as a Dictionary object (aka associative array).

Working with dictionaries

```
echo ${sounds[dog]} # Dog's sound  
echo ${sounds[@]}   # All values  
echo ${!sounds[@]}  # All keys  
echo $#sounds[@]    # Number of elements  
unset sounds[dog]   # Delete dog
```

Iteration

Iterate over values

```
for val in "${sounds[@]}; do  
    echo $val  
done
```

Iterate over keys

```
for key in "${!sounds[@]}; do  
    echo $key  
done
```

Options

Options

```
set -o noclobber # Avoid overlay files (echo "hi" > foo)  
set -o errexit   # Used to exit upon error, avoiding cascading errors  
set -o pipefail  # Unveils hidden failures  
set -o nounset   # Exposes unset variables
```

Glob options

```
shopt -s nullglob      # Non-matching globs are removed ('*.foo' => '')
shopt -s failglob      # Non-matching globs throw errors
shopt -s nocaseglob    # Case insensitive globs
shopt -s dotglob       # Wildcards match dotfiles ("*.sh" => ".foo.sh")
shopt -s globstar      # Allow ** for recursive matches ('lib/**/*.rb' => 'lib/a/b/c.rb')
```

Set `GLOBIGNORE` as a colon-separated list of patterns to be removed from glob matches.

History

Commands

<code>history</code>	Show history
<code>shopt -s histverify</code>	Don't execute expanded result immediately

Expansions

<code>!\$</code>	Expand last parameter of most recent command
<code>!*</code>	Expand all parameters of most recent command
<code>!-n</code>	Expand <code>n</code> th most recent command
<code>!n</code>	Expand <code>n</code> th command in history
<code>!<command></code>	Expand most recent invocation of command <code><command></code>

Operations

<code>!!</code>	Execute last command again
<code>!!:s/<FROM>/<TO>/</code>	Replace first occurrence of <code><FROM></code> to <code><TO></code> in most recent command
<code>!!:gs/<FROM>/<TO>/</code>	Replace all occurrences of <code><FROM></code> to <code><TO></code> in most recent command
<code>!\$:t</code>	Expand only basename from last parameter of most recent command
<code>!\$:h</code>	Expand only directory from last parameter of most recent

Slices

command

<code>!!:n</code>	Expand only <code>n</code> th token from most recent command (command is <code>0</code> ; first argument is <code>1</code>)
-------------------	--

<code>!^</code>	Expand first argument from most recent command
-----------------	--

<code>!\$</code>	Expand last token from most recent command
------------------	--

<code>!!:n-m</code>	Expand range of tokens from most recent command
---------------------	---

<code>!!:n-\$</code>	Expand <code>n</code> th token to last from most recent command
----------------------	---

`!!` can be replaced with any valid expansion i.e. `!cat`, `!-2`, `!42`, etc.

Miscellaneous

Numeric calculations

```
$( (a + 200) )      # Add 200 to $a
```

```
$( (RANDOM%=200) )   # Random number 0..200
```

Subshells

```
(cd somedir; echo "I'm now in $PWD")
pwd # still in first directory
```

Redirection

```
python hello.py > output.txt      # stdout to (file)
python hello.py >> output.txt      # stdout to (file), append
python hello.py 2> error.log       # stderr to (file)
python hello.py 2>&1                # stderr to stdout
python hello.py 2>/dev/null        # stderr to (null)
python hello.py &>/dev/null         # stdout and stderr to (null)
```

```
python hello.py < foo.txt          # feed foo.txt to stdin for python
```

Inspecting commands

```
command -V cd
#=> "cd is a function/alias/whatever"
```

Trap errors

```
trap 'echo Error at about $LINENO' ERR
```

or

```
traperr() {
  echo "ERROR: ${BASH_SOURCE[1]} at about ${BASH_LINENO[0]}"
}

set -o errtrace
trap traperr ERR
```

Case/switch

```
case "$1" in
  start | up)
    vagrant up
    ;;

  *)
    echo "Usage: $0 {start|stop|ssh}"
    ;;
esac
```

Source relative

```
source "${0%/*}/../share/foo.sh"
```

printf

```
printf "Hello %s, I'm %s" Sven Olga
#=> "Hello Sven, I'm Olga"

printf "1 + 1 = %d" 2
#=> "1 + 1 = 2"

printf "This is how you print a float: %f" 2
#=> "This is how you print a float: 2.000000"
```

Directory of script

```
DIR="${0%/*}"
```

Getting options

```
while [[ "$1" =~ ^- && ! "$1" == "--" ]]; do case $1 in
  -V | --version )
    echo $version
    exit
    ;;
  -s | --string )
    shift; string=$1
    ;;
  -f | --flag )
    flag=1
    ;;
esac; shift; done
if [[ "$1" == '--' ]]; then shift; fi
```

Heredoc

```
cat <<END
hello world
END
```

Reading input

```
echo -n "Proceed? [y/n]: "
read ans
echo $ans
```

```
read -n 1 ans    # Just one character
```

Special variables

\$?	Exit status of last task
\$!	PID of last background task
\$\$	PID of shell
\$0	Filename of the shell script

See Special parameters.

Go to previous directory

```
pwd # /home/user/foo
cd bar/
pwd # /home/user/foo/bar
cd -
pwd # /home/user/foo
```

Check for command's result

```
if ping -c 1 google.com; then
    echo "It appears you have a working internet connection"
fi
```

Grep check

```
if grep -q 'foo' ~/.bash_history; then
    echo "You appear to have typed 'foo' in the past"
fi
```
